

FENESTRATION  
CANADA

# BOABC Conference

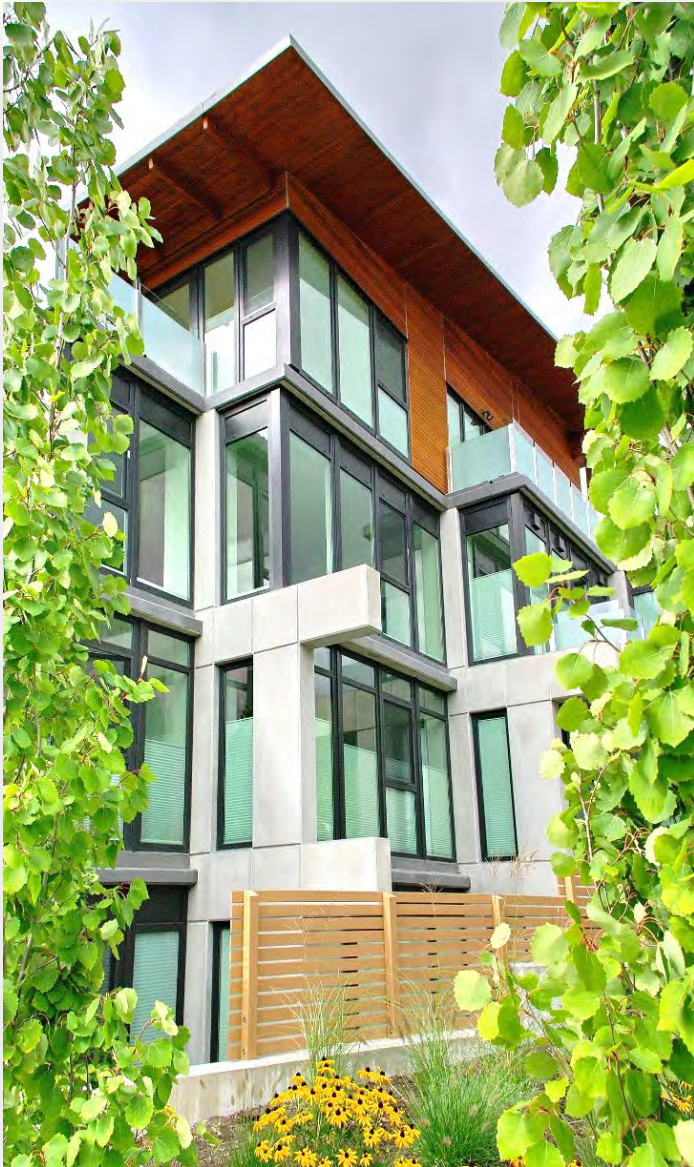

## Why is the NBC Creating Solar Heat Gain Maximums for Windows and Doors?

Adrian Edge

Director of Codes and Regulatory Affairs, Fenestration Canada

[adrian@fenestrationcanada.ca](mailto:adrian@fenestrationcanada.ca)

## Intended Takeaways

- Understand SHGC & Heat Gain
- What Happens When We Get It Wrong
- Code Changes & Why They Matter
- What You Can Do (as Building Officials)

FENESTRATION  
CANADA

# Townhouse Project in Vancouver

**Phase 1**  
30 Units

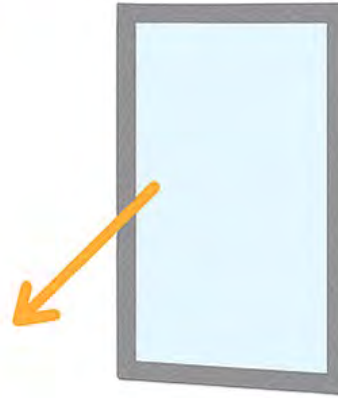

**Phase 2**  
120 Units

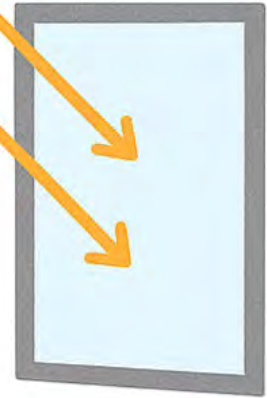

FENESTRATION  
CANADA

# What is a “SHGC”?

SHGC or Solar Heat Gain Coefficient is the fraction of heat represented by a number between 0 and 1

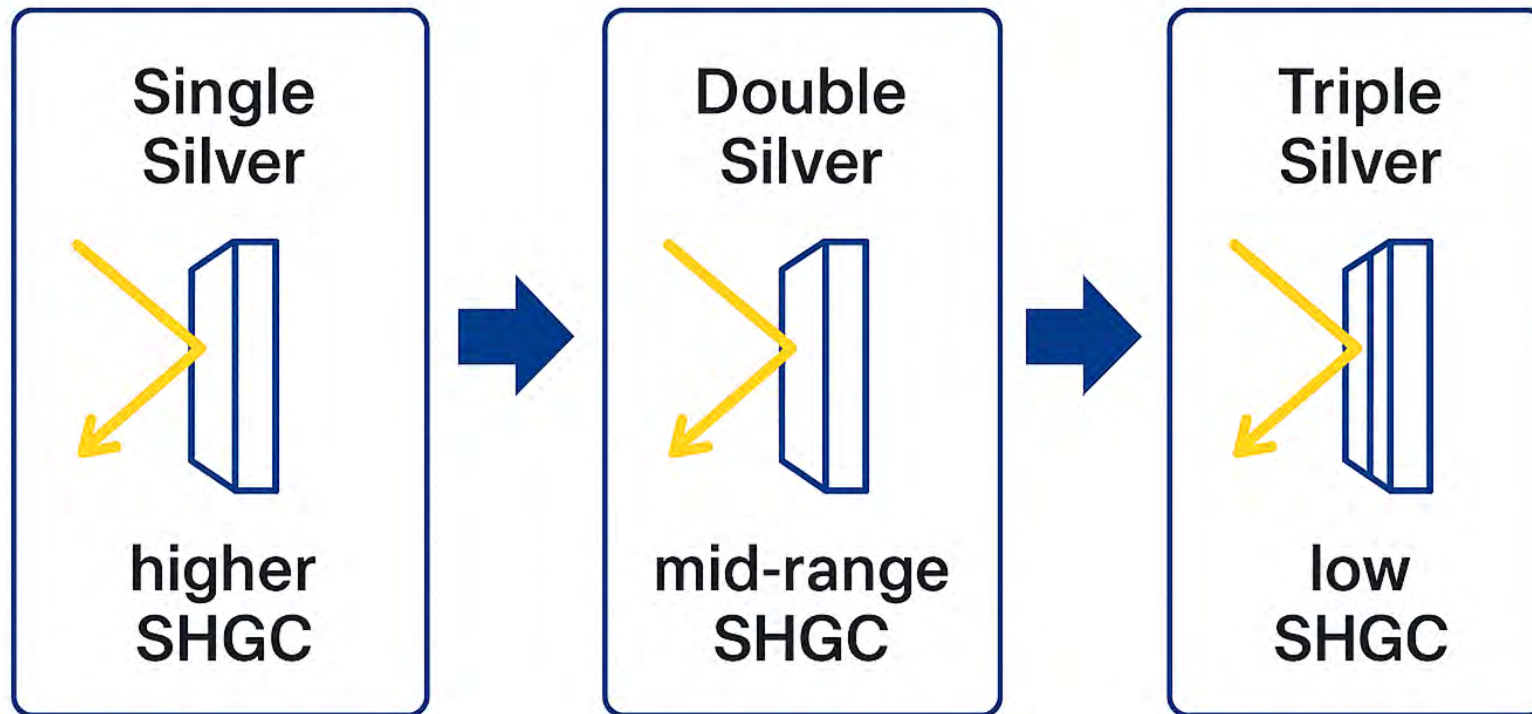

0.2 or 20%

0.6 or 60%

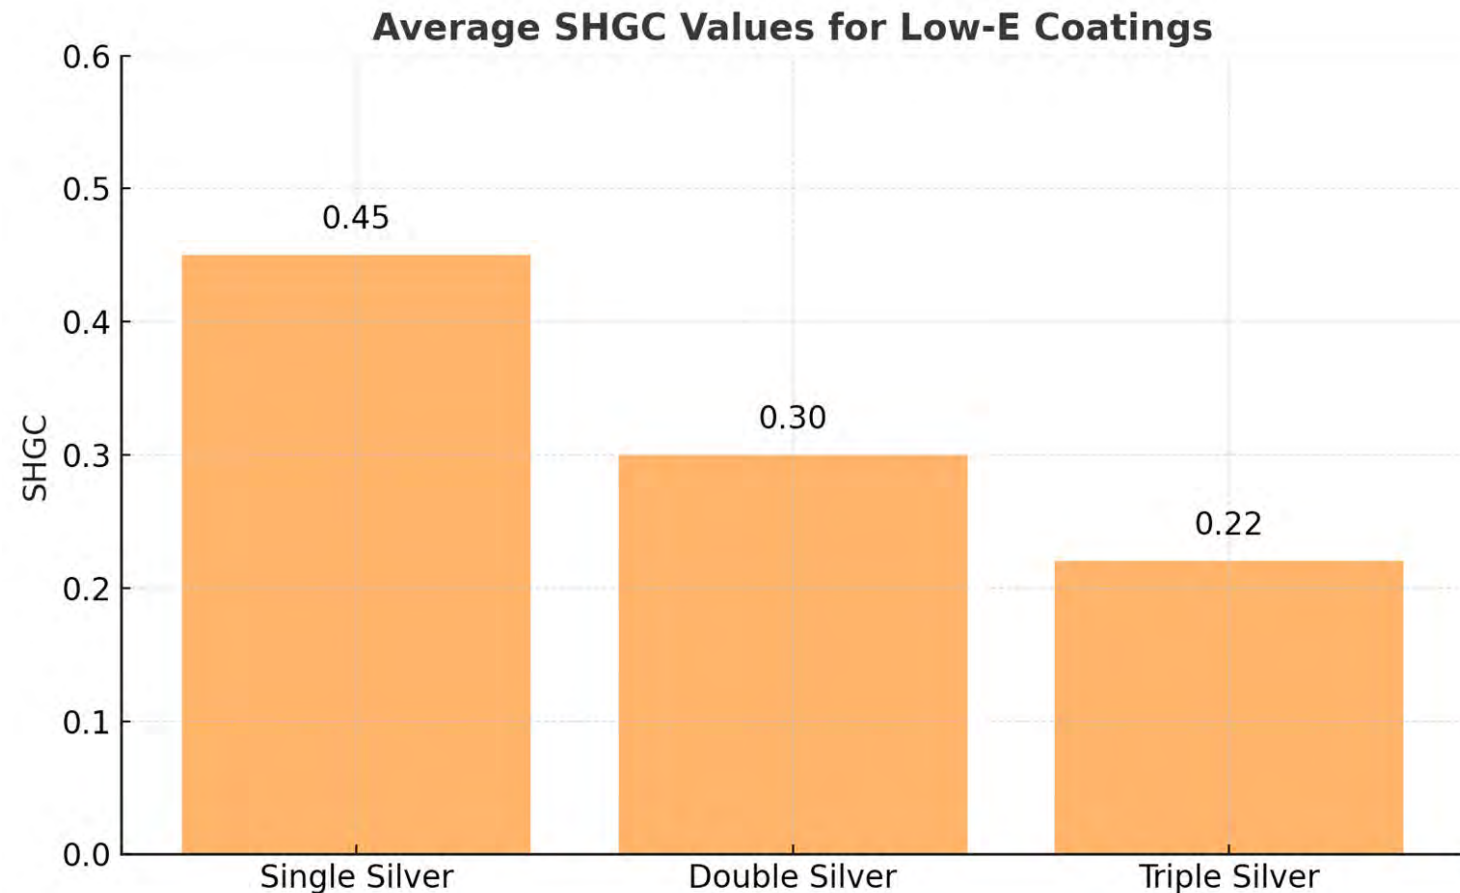

# Using Silver to block Solar Heat

# How 1, 2, and 3 layers of silver affect SHGC

SHGC is not a dial  
and additional LowE  
coatings are cheap

# Making Solar Heat Tangible: Relative Heat Gain

Relative Heat Gain

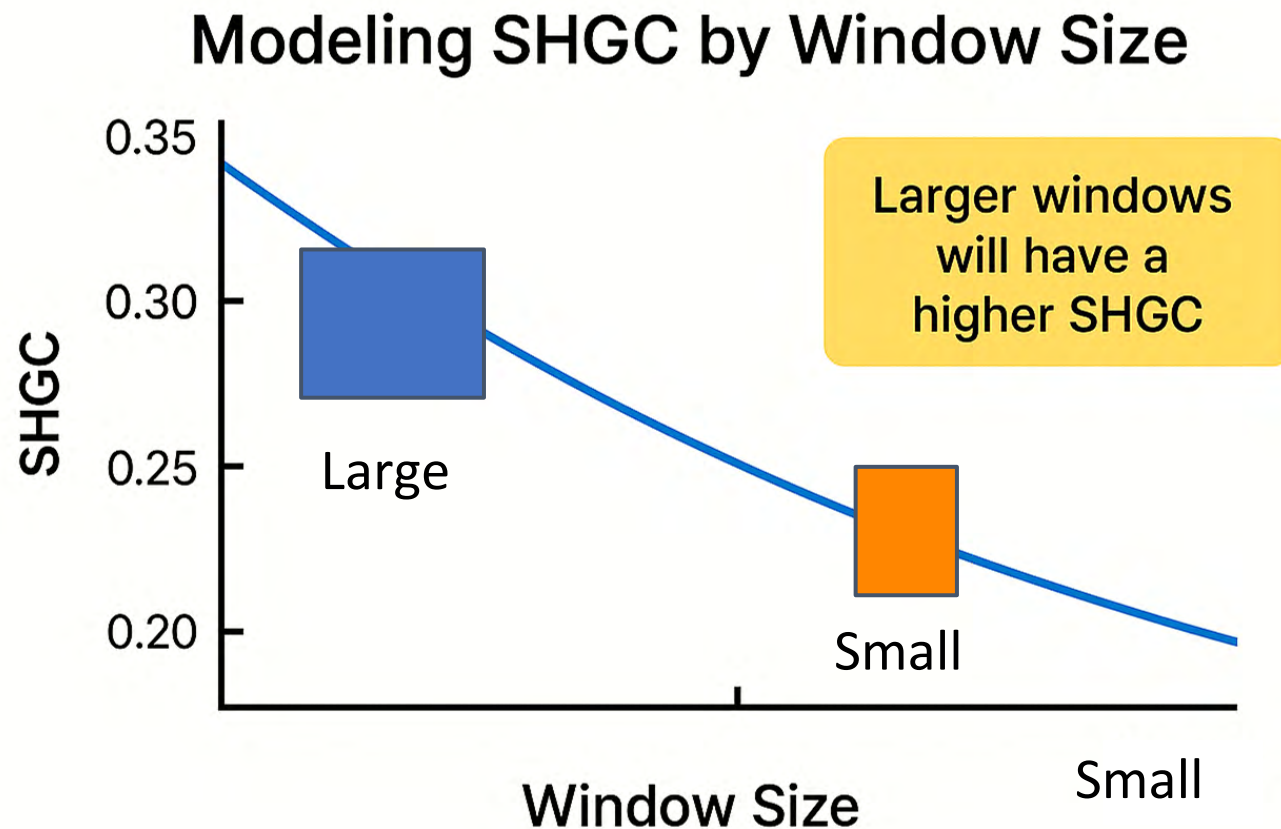

**600 W**

Relative Heat Gain

**1,800 W**

# Modelling SHGC by Window Size

*City of Vancouver will require size-specific modeling in Sept.*

*Fenestration Canada is releasing a tool to support this.*

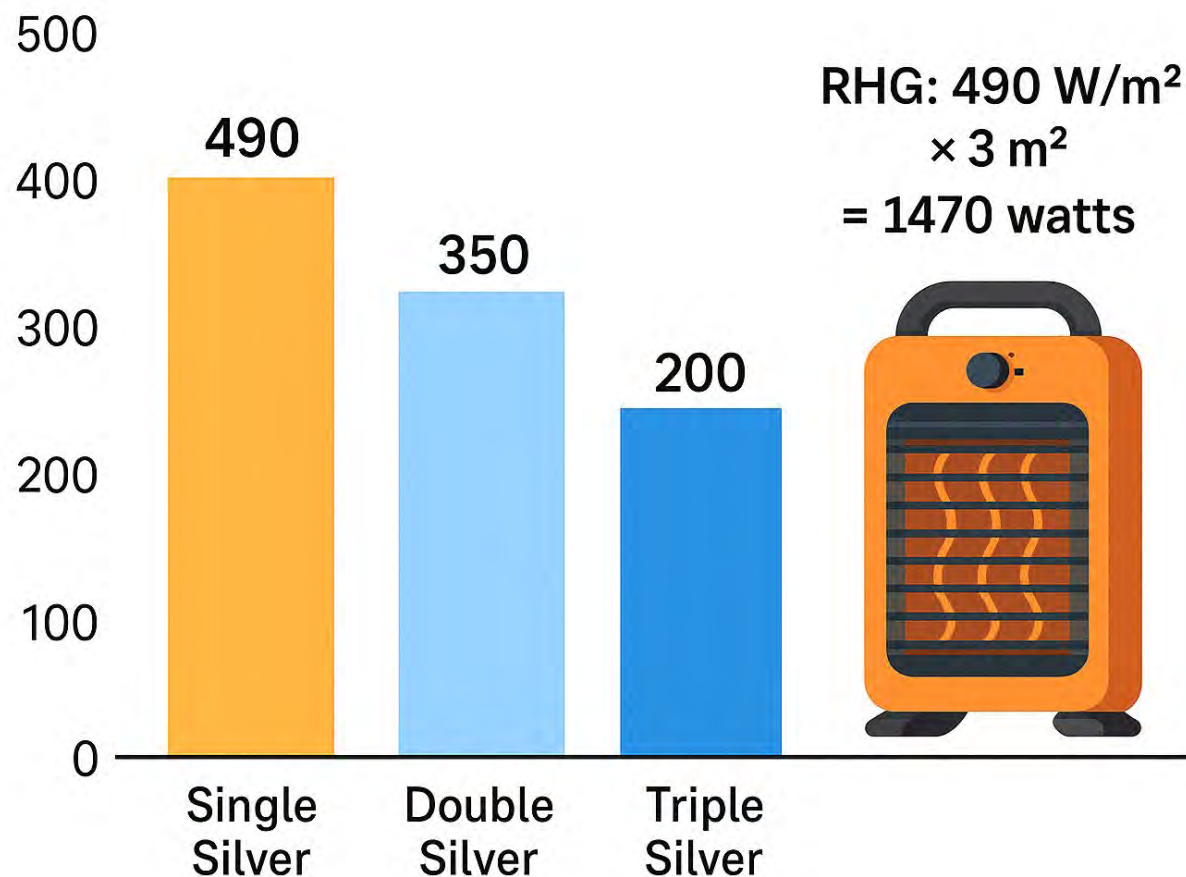

# Value Engineering out Comfort

| Planned Design   | As-Built<br>(Post-Value Engineering)  |
|--|---|
| <ul style="list-style-type: none"><li>• Exterior shading (solar fins)</li></ul>      |  Removed                               |
| <ul style="list-style-type: none"><li>• Operable exterior blinds</li></ul>           |  Removed                               |
| <ul style="list-style-type: none"><li>• Passive House-level envelope</li></ul>       |  Maintained                            |
| <ul style="list-style-type: none"><li>• Triple glazing w/ SHGC target 0.35</li></ul> |  May vary due to glass spec          |
| <ul style="list-style-type: none"><li>• Cooling system</li></ul>                     |  Removed<br>(but rough-in preserved) |

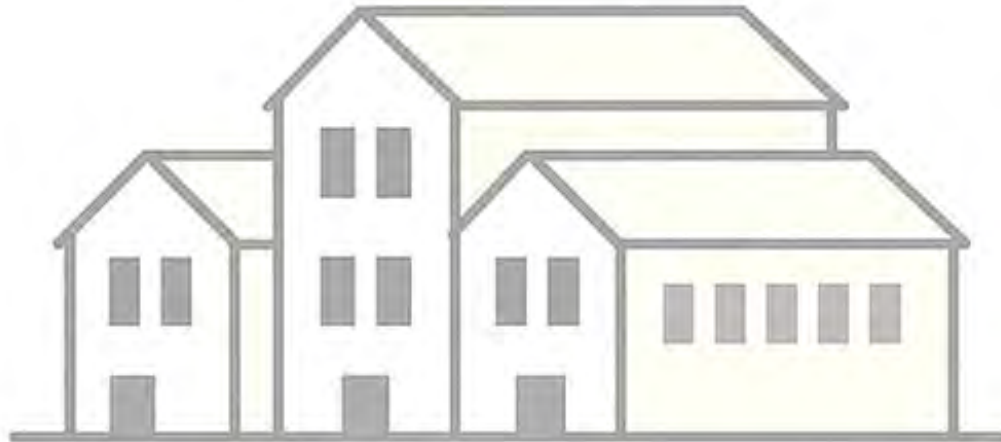

# How Much Heat Are We Talking About?

# And Overheating Happens Anyway

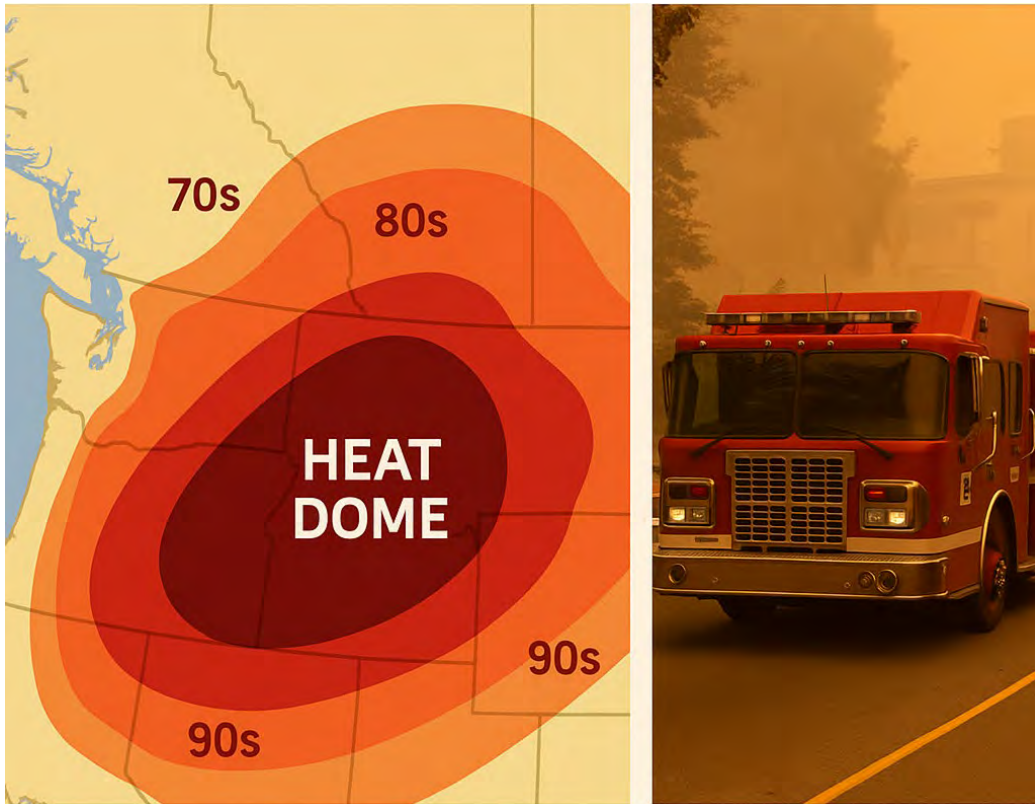

**Phase 2**  
120 Units

# Performance on Paper Isn't Enough

# Vancouver Heat Dome (June 25th - July 1st 2021)

- 619 deaths
- Historical Environmental Data (87-16)
- High Performance Buildings are not immune
- Solar exposure + airtight envelopes = thermal trap

# BC Response

**26C**  
**MAXIMUM**  
**INDOOR TEMP**

- BC Housing design guideline (2022)
- Indoor temps should not exceed 26°C
- More than 20 hours annually
- New social housing, publicly-funded buildings

# Code Response: PCF 1823

PCF 1823 proposes maximum SHGC values for windows, doors, and skylights in the 2025 NBC.

Table [\[9.36.2.7.-B\]](#)  
Solar Heat Gain Coefficient of Fenestration and Doors  
Forming Part of Sentence [\[9.36.2.7.\] 9.36.2.7.\(\[3\] 2\)](#)

| Fenestration and Door Area to Gross Wall Area Ratio (FDWR) | <u>Heating Degree-Days of Building Location <sup>(1)</sup> in Celsius Degree-Days</u> |                            |                            |                             |                             |                         |
|--|---|----------------------------|----------------------------|-----------------------------|-----------------------------|-------------------------|
|  | Maximum Solar Heat Gain Coefficient <del>of fenestration and doors</del>              |                            |                            |                             |                             |                         |
|  | <u>Zone 4 &lt; 3000</u>   | <u>Zone 5 3000 to 3999</u> | <u>Zone 6 4000 to 4999</u> | <u>Zone 7A 5000 to 5999</u> | <u>Zone 7B 6000 to 6999</u> | <u>Zone 8 &gt; 7000</u> |
| FDWR $\leq 17\%$   | <u>0.35</u>   | <u>0.40</u>                | 0.45                       | <u>0.50</u>                 | <u>0.55</u>                 | <u>0.60</u>             |
| $17\% < \text{FDWR} \leq 22\%$                             | <u>0.30</u>   | <u>0.35</u>                | 0.40                       | <u>0.45</u>                 | <u>0.50</u>                 | <u>0.55</u>             |
| <u>22% &lt; FDWR</u> $\leq 22.30\%$                        | 0.26  | <u>0.30</u>                | <u>0.35</u>                | <u>0.40</u>                 | <u>0.45</u>                 | <u>0.50</u>             |
| <u>FDWR &gt; 30%</u>                                       | <u>0.26</u>   |                            |                            |                             |                             |                         |

# Research Behind PCF 1823

## **BUILDING ENERGY SIMULATIONS**

**Impact of SHGC on the thermal performance of detached houses in different Canadian climate zones**

**AVFQ**

Association de vitrerie  
et fenestration du Québec

# Code Response: PCF 2061

PCF 2061 introduces a maximum modelled temperature for the entire dwelling unit.

## **[9.33.3.] 9.33.3. Design Temperatures**

### **[9.33.3.1.] 9.33.3.1. Indoor Design Temperatures**

- [1] 1)** At the outside winter design temperature, required heating facilities shall be capable of maintaining an indoor air temperature of not less than
- [a] a) 22°C in all living spaces,
  - [b] b) 18°C in unfinished *basements*,
  - [c] c) 18°C in common *service rooms*, ancillary spaces and *exits* in houses with a *secondary suite*, and
  - [d] d) 15°C in heated crawl spaces.
- [2] --)** Except as provided in Sentence (3), at the outside summer design temperature, permanently installed cooling facilities shall be capable of maintaining an indoor air temperature of not more than 26°C in at least one living space in each dwelling unit.
- [3] --)** Optional comfort cooling facilities shall be designed using the indoor design temperature specified in CSA F280, "Determining the required capacity of residential space heating and cooling appliances", or applicable documents referenced in Article 9.33.4.1.

# What Could Have Prevented This?

| Design Intentions  | What Would Have Made the Difference  |
|--|--|
|  SHGC-specified glazing (0.35 target) |  Keep exterior shading (or integrate passive solutions)       |
|  Passive House envelope               |  Retain active cooling (not just rough-in)                    |
|  Cooling system (originally included) |  Coordinate glazing SHGC with real conditions                 |
|  External shading devices           |  Give QPs/designers override authority for overheating risk |
|  Operable blinds                    |  Model against real climate data + orientation              |

# Where Building Officials Can Add Value

Stay educated on changes to Solar Heat Gain

Check for substituted glazing products

Provide feedback when code and function differ

# Where We Go From Here

- ★ New Codes are Coming
- ★ The tools are improving
- ★ Let's make this better before things get worse

FENESTRATION  
CANADA

# Thank-you!

Adrian Edge
